Hiring Manager

Software Engineering Recruitment Team

Dear Hiring Manager,

I am writing to express my strong interest in the Software Engineering Intern position. As a dedicated second-year Computer Science & Engineering student at GN Group of Institutes, I have cultivated a robust foundation in core programming languages, data structures, and web development technologies. I am eager to leverage my technical skill set and passion for logic building to contribute meaningfully to your engineering team's ongoing projects.

Throughout my academic journey, I have prioritized hands-on practical experience by engineering several functional projects. My development background includes building an AI Voice Assistant in Python, where I implemented voice command processing and integrated external APIs. I also created a Word Frequency Analyzer that parses text datasets and visualizes analytical trends using Matplotlib, demonstrating my capacity to handle data processing tasks. Additionally, I designed and deployed a responsive Web-Based Calculator hosted live via GitHub Pages using HTML5, CSS3, and JavaScript.

My technical stack includes proficiency in Python, Java, C, and modern development tools such as Git, GitHub, and VS Code. Beyond core coding skills, I focus on strengthening my understanding of Data Structures, Object-Oriented Programming, and algorithmic logic. I pride myself on being a highly disciplined and quick learner who maintains a consistent daily coding routine alongside academic studies. This commitment enables me to adapt rapidly to new frameworks, perform efficient debugging, and deliver clean, organized code.

I am highly motivated to bring my technical capabilities, proactive problem-solving mindset, and strong work ethic to your dynamic organization. I welcome the opportunity to discuss how my academic background and project experience align with your team's development goals during an interview. Thank you for your time and consideration.

Sincerely,

Shazib Huda
